For ones who are Dissatisfied or have Concerns about High Temperature Filling and Boil Sterilizing

In recent years, with the progress in diversification and individualization of eating lifestyles, boil sterilized materials continue to grow in popularity. Following from this, there is also a demand for liquid filling to support hot filling, which is effective in preventing contamination by microorganisms, and films are required that are able to withstand the heat of the sterilization temperatures to allow high speed filling. The hot fill-supporting XA-H film is a stabilized high-speed liquid filling film capable of handling 90°C hot fill and boil sterilization.

XA-H Features

- (1) Allows 90°C hot fill and boil sterilizing.
- (2) Enables high-speed automatic filling (Has an enlarged heat seal temperature range).
- (3) Has outstanding hot tack ability and foreign substance seal ability.
- (4) The rupture strength is outstanding.
- (5) Has exceptional tearing ability.

※Due to the regulations in various countries, there may be situations where exporting will not be possible. For more details, please contact our sales representatives.
